## 5.System Architect

### *Job Description*

We are looking for a highly skilled and experienced System Architect to join our team. The ideal candidate will have a deep understanding of IT systems, architecture, and infrastructure. You will be responsible for designing, implementing, and maintaining complex systems that meet the needs of our organization. This role requires a strategic thinker who can see the big picture and understand how different components of a system interact with each other. You will work closely with other IT professionals, including developers, network engineers, and security experts, to ensure that our systems are robust, scalable, and secure. Your primary goal will be to create systems that are efficient, reliable, and easy to maintain. You will also be responsible for staying up to date with the latest industry trends and technologies, and for making recommendations on how we can improve our systems. This is a challenging and rewarding role that offers the opportunity to make a significant impact on our organization.

**Responsibilities**

- Design and develop IT systems and infrastructure.
- Collaborate with developers, network engineers, and security experts.
- Ensure systems are robust, scalable, and secure.
- Create and maintain system documentation.
- Conduct system performance analysis and optimization.
- Develop and implement system integration strategies.
- Monitor system performance and troubleshoot issues.
- Stay up to date with industry trends and technologies.
- Make recommendations for system improvements.
- Ensure compliance with security and regulatory requirements.
- Provide technical guidance and support to team members.
- Participate in project planning and management.
- Develop disaster recovery and business continuity plans.
- Evaluate and select appropriate hardware and software solutions.
- Manage system upgrades and migrations.
- Ensure systems are easy to maintain and support.
- Develop and enforce system standards and best practices.
- Conduct risk assessments and develop mitigation strategies.
- Coordinate with vendors and service providers.
- Provide training and support to end-users.

### *Required Skills*

**Technical Skills:**

- Should have worked in the projects with the system architecture or related role.
- Strong understanding of IT systems, architecture, and infrastructure.
- Experience with system design and development.
- Knowledge of network protocols and security.
- Proficiency in system performance analysis and optimization.
- Experience with system integration and troubleshooting.

- Strong problem-solving and analytical skills.
- Excellent communication and collaboration skills.
- Ability to work independently and as part of a team.
- Experience with project management and planning.
- Knowledge of industry trends and technologies.
- Familiarity with regulatory and security requirements.
- Experience with disaster recovery and business continuity planning.
- Ability to develop and enforce system standards and best practices.
- Strong organizational and time management skills.
- Ability to manage multiple projects and priorities.
- Experience with vendor and service provider management.
- Proficiency in technical documentation and reporting.
- Ability to provide training and support to end-users.

**Attributes:**

- Professionalism with excellent time management skills.
- Ability to prioritize workload.
- Attention to details and Quick learning ability.
- Ability to work independently.
- Persuasive in both communication, presentation and facilitation skills.
- Leadership skills.
- Ability to deliver on tight schedules with minimal supervision.
- Ability to manage and influence virtual teams.
- Strong Interpersonal and problem-solving skills.
